

Porta Kleen's Hydro-Excavation process provides a safe alternative to conventional digging methods such as track hoes, augers, backhoes, and bulldozers. By using pressurized water and high-powered vacuuming, damage to critical underground utilities is minimized and completed in a fraction of the time.

## FEATURES & SPECIFICATIONS

- Most powerful water pressure and suction in the industry to easily excavate frozen ground
- Non-destructive soil and debris removal, trenching, remote digging, and potholing reaches locations where traditional excavation may not be possible
- Rear-mounted boom offers impressive range of motion and pivot
- Tilt-ejection unloading provides fast and thorough removal of debris
- Surrounding area and soil remain undamaged which increases efficiency and decreases downtime
- Remote controlled vacuuming and water system, allowing for one man operation
- Integrated fall-protection harness decreases safety-related incidents

### BOOM RANGE

27-foot reach  
335° total range  
45° upward pivot  
25° downward pivot  
35-foot digging depth

### VACUUM BLOWER

5,800 CFM  
27" blower

### WATER PUMP

3,200 PSI

### STORAGE TANK

1,500-gallon  
water tank,  
18 GPM flow

### DEBRIS STORAGE

12-cubic yard  
debris tank

### REMOTE DIGGING

Remote digging  
to 600-feet

## SAFETY AND AFFILIATIONS

- Superior EMR and TRIR ratings
- All operators OQ
- Affiliations with all unions

### NOZZLES

Multiple  
cutting nozzles

### HEATER

705K BTU  
water heater
